

## Extension Packs / Stuff packs compatibility

.The following test was conducted to see exactly how the game is reacting when you install a building available for download but performed with several extension or stuff packs that you don't have.

For this test, the lot "Plaisir d'Antan" ( <http://www.khany sims.be/plaisirs-antan.php> ), was installed on 2 PCs

On PC 1: base game only

On PC 2: all EP /SP up to Pets

Both games are patched with 1.26 update coming with the EP "Pets".

### Results

.We can notice from the screens all objects not found on the computer have been automatically replaced by a similar object EXCEPT 2: the spiral staircase and an electronic piano.

### Conclusions

.Nothing catastrophic will occur if you download and install a lot for which you don't have all the EP/SP used to make the lot. Though, it may be necessary, in some cases, to put some hands on the lot and make some changes to make it fully playable.

### Thanks

.To Zano who performed this test with his well known kindness and serious! Find him on "Les Dessous des Sims 3" (<http://www.les-dessous-des-sims3.fr/>) and, if you have questions, just post them on the forum (<http://ateliers.les-dessous-des-sims3.fr/>) – french forum only.

### Any questions?

.You can contact Khany Sims team on following e-mail : [khany sims@gmail.com](mailto:khany sims@gmail.com)
